

A boxplot comparing the distribution of Mercury Level (in ppm) for two species. The x-axis is labeled 'Mercury Level' and ranges from 0.0 to 1.5. The y-axis has two categories: 'Species 1' (bottom) and 'Species 2' (top). The box for Species 1 is red, with a median around 0.45 ppm. The box for Species 2 is cyan, with a median around 0.55 ppm. Individual data points are overlaid on the boxplots. Species 1 has a wider range of values, extending from approximately 0.1 to 1.3 ppm, while Species 2 has a narrower range, extending from approximately 0.05 to 1.2 ppm.
